

CONTENTS

| | |
|--|-----|
| Preface | 7 |
| Agnieszka Zięba, Jan Kordos Comparing three methods of standard error estimation for poverty measures | 11 |
| Mauno Keto, Erkki Pahkinen On sample allocation for effective EBLUP estimation of small area totals – “Experimental Allocation” | 27 |
| Paola Maddalena Chiodini, Rita Lima , Giancarlo Manzi, Bianca Maria Martelli, Flavio Verrecchia Criticalities in applying the Neyman’s optimality in business surveys: a comparison of selected allocation methods | 37 |
| Janusz Wywił Simulation analysis of accuracy estimation of population mean on the basis of regression type strategy dependent on order statistic of auxiliary variable | 73 |
| Tomasz Żądło On some pseudo-EBLUP in the case of modeling longitudinal profiles | 83 |
| Jan Kubacki, Alina Jędrzejczak Estimation of Gini coefficient for regions from Polish Household Budget Survey using small area estimation methods | 99 |
| Kateřina Gurinová, Vladimřra Hovorková Valentová Treating statistical data set with missing values | 111 |
| Ewa Dziwok Yield curve estimation: a comparison of methods and the applications in Polish market | 121 |
| Wojciech Gamrot Correlated response behavior and properties of population total estimates | 131 |
